CP 130 Sliding Door

CP 130 is a premium insulated sliding system combining high weather performance with enhanced security and great aesthetics.

Available in slide or lift-and-slide variants, this sliding door system is designed with ease of use in mind. The system not only glides smoothly, it also has a slim-line mid-section interlock to maximise the glass area and can be specified with our integrated ventilation system, Ventalis.

With a maximum vent weight of 300 kg and a maximum height of 2.7 m, this versatile system is ideal for most residential applications. Our revolutionary open corner system for the CP 130-LS makes it possible to open up two sides of a room with no corner post, creating a truly remarkable architectural feature.

Thermal insulation is important for most people in the UK, and the CP 130 offers industry-leading performance in this respect. With a double glazed sealed unit, the CP 130 can offer a whole door U-value as low as 1.5 W/m²K; with triple glazing, this can be further improved to a phenomenal 1.1 W/m²K.

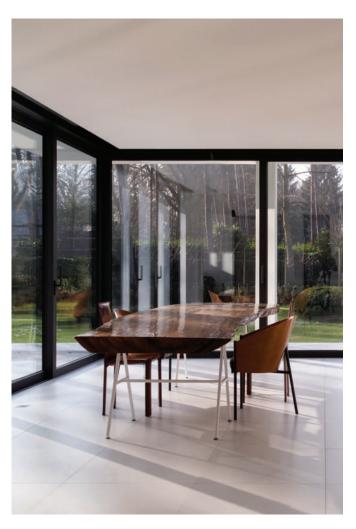

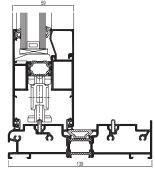

Letting the outside in

A sliding door opens up a multitude of possibilities. Open this door just a few centimetres for a little fresh air, a little wider to slip out into the garden or open it all the way to really let the outside in. This versatile door creates an extra feeling of space and generates more natural light within the home.

CP 130 Slide and CP 130 Lift & Slide

All types of CP 130 sliding door use durable, stainless steel wheels and rails for ease of operation. In the case of the lift and slide system, the sliding door is lifted slightly before opening or closing. This reduces the friction and makes the operation smooth and effortless. In the closed position, the lift and slide door is lowered onto the track, providing additional weather resistance.

Monorail, duo rail or 3-rail

A monorail system combines a moving part with a fixed glazed element that is anchored directly into the outer frame profile for a minimalistic look. The fixed pane is normally set to the inside of the track and is internally beaded.

| Monorail | CP 130 | CP 130-LS |
|----------|--------|-----------|
| | х | Х |

A duo rail system integrates two glazed opening vents with an identical appearance, giving an aesthetically pleasing and versatile sliding door. Both vents can be made as sliding elements, giving total flexibility.

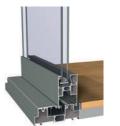

| Duo rail | CP 130 | CP 130-LS |
|----------|--------|-----------|
| | | |
| | X | Х |
| | | |

A 3-rail system makes it possible for a third opening vent to be installed. This solution allows the user to slide door leaves one and two behind leaf three, opening up two-thirds of the width to the garden.

Ventalis integration

CP 130-LS open corner system

Designed exclusively for the CP 130-LS duo rail system, this clever corner system comprises two sliding units that meet at a corner. Closed, the thick double weather gaskets protect against the elements; slide the two doors apart to open up the whole corner with no fixed corner post to get in the way or obstruct the view.

Performances

| Energy | | | | | | | | | | | | | |
|----------|-------------------------------------------------------------------------------|---------------------------------------------------------------------------|---------------|----------------|------|-------------------------------|----------------|----------------|----------------|-------------------|-----------------|------------------|--|
| | Thermal Insulation ⁽¹⁾ EN 10077-2 | Uf-value down to 2.35 W/m²K, depending on the frame/vent combination | | | | | | | | | | | |
| Comfort | | | | | | | | | | | | | |
| | Acoustic performance ⁽²⁾ EN ISO 140-3; EN ISO 717-1 | Rw (C; Ctr) = 35 (-2;-6) dB / 39 (-1;-3) dB, depending on glazing type | | | | | | | | | | | |
| | Air-tightness, max. test pressure ⁽³⁾ EN 12207 | 1 (150 Pa) | | | | 2 (300 Pa) | | 3 (600 Pa) | | | | 4 (600 Pa) | |

| % | Burglar resistance ⁽⁶⁾ ENV 1627 - ENV 1630 | RC 1 | | | RC 2 | | | | RC 3 | | | | |

This table shows classes and values of performances which can be achieved for specific configurations and opening types.

- (1) The Uf-value measures the heat flow. The lower the Uf-value, the better the thermal insulation of the frame.
- $^{(3)}$ The air-tightness test measures the volume of air that would pass through a closed window at a certain air pressure.
- (4) The water-tightness test involves applying a uniform water spray at increasing air pressure until water penetrates the window. (5) The wind load resistance is a measure of the profile's structural strength and is tested by applying increasing levels of air pressure to simulate the wind force.
- (6) The burglar resistance is tested by static and dynamic loads, as well as by simulated attempts to break in using specified tools. This variant requires specific burglar resistance accessories
- (7) Please refer to Reynaers' CE passport for all technical data including size limitations.
